

SavaCares

Restore. Resume. Recover.

SCREENING KIOSKS

The kiosks will electronically collect temperatures and other screening information to reduce possible outbreaks caused by asymptomatic individuals who come into our center.

VICTORY SPRAYERS

Electrostatic sprayers quickly and effectively disinfect, sanitize and decontaminate high-touch hard surfaces like door handles, elevators, nursing stations and restrooms.

They are shown to kill 99.999% of germs within 3-5 minutes and the Norovirus in as little as 45 seconds.

AIR IONIZATION TECHNOLOGY

Air purification technology cleans the air everywhere. It injects billions of invisible, charged ions into the air stream that attach to harmful pathogens, like COVID-19, to inactivate them before they can cause harm.

We are proud to be one of the first long-term care providers to install this revolutionary technology.

INFECTION PREVENTIONISTS

These medical professionals will provide an extra level of support to our center clinical teams, residents and patients through the education and practice of leading infection control measures.

COMMITTED TO YOUR SAFETY

Protecting and preserving your health and safety has always been our top priority. We have made significant investments in the tools, people and processes that will help our teams and residents **restore** connections with family and loved ones, **resume** vital treatments and outpatient therapies, and **recover** in a clean, safe, nurturing environment.
